FLOWSIC600-XT

Custody transfer natural gas measurement with intelligent diagnostic functions

The perfect match

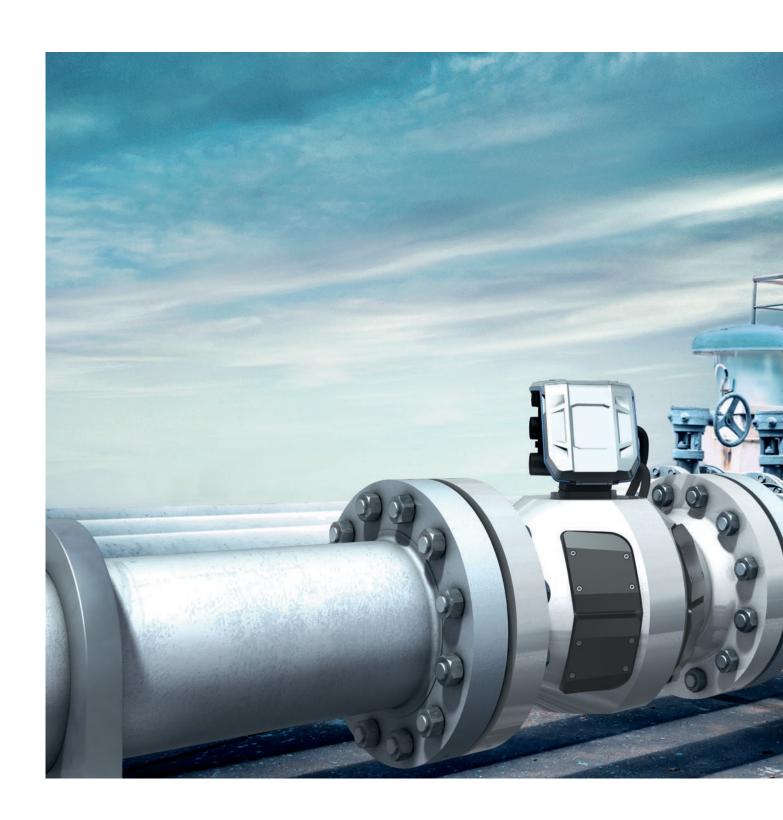

- Low measurement uncertainty in every application
- High measurement data reliability and availability
- The right ultrasonic gas flowmeter for every application – without compromise
- Simple device integration even in compact systems
- Quick and easy commissioning and checking
- Cost-effective quantification of the H₂ content in natural gas

FLOWSIC600-XT: The perfect match

As the market leader for reliable and highly precise ultrasonic gas flow measuring instruments, the question we have to ask ourselves is this: How can we get even stronger? And the answer is actually rather simple – the way for us to improve is to listen attentively to the individual requirements of the people that use our products and adapt them accordingly.

With four device versions available, FLOWSIC600-XT can take on any challenge – whether it is being used as a standalone or system solution – and delivers best measurement performance. Its trend-setting design houses some impressive and innovative internal features: $i\text{-}diagnostics^{\text{TM}}$ for smart application diagnostics with a built-in solution

wizard, and PowerIn Technology $^{\!\scriptscriptstyle TM}\!,$ which continues to take measurements for up to three weeks in the event of a mains voltage failure. FLOWSIC600-XT features an ideal combination of maximum measurement accuracy, longterm stability, and unparalleled operational safety, yet is not at all complicated to use.

Measurement data reliability and availability

FLOWSIC600 flow measurement technology already provided absolute long-term stability in extreme ambient conditions, and now FLOWSIC600-XT combines the features of its predecessor with unprecedented usability. Throughout its entire service life, it meets every requirement for safe, stable, and custody transfer gas quantity measurement. Measurement and diagnostics data as well as status changes can be recorded permanently in six accessible data archives. FLOWSIC600-XT further ensures that measurements continue to be taken and data is stored even in the event of a mains voltage failure, thanks to PowerIn Technology™.

Simple device integration – even in compact systems

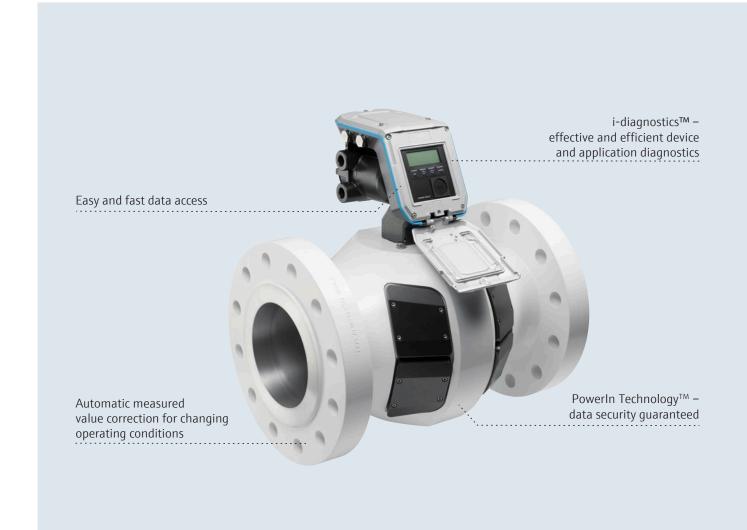

We are constantly further developing the ultrasonic technology. FLOWSIC600-XT boasts the best measurement technology available today, meaning it delivers highly precise measurement results.

It is MID certified and compliant with ISO 17089 and AGA9 and compatible with its predecessor FLOWSIC600. It can be integrated successfully into any system. Plus, the new FLOWSIC600-XT Forte meets the requirements of compact installations and is certified to OIML R 137 class 0.5.

Quick and easy device commissioning and checking

i-diagnostics[™] helps make device commissioning and checking quick and easy. Furthermore i-diagnostics[™] provides extended flowmeter and application diagnostics during operation. Should maintenance ever be required, the intelligent solution wizard provides support.

The built-in infrared interface means measured value and diagnostics data can be accessed in no time, making servicing quick and efficient.

FLOWSIC600-XT – Always the right gas flowmeter for your application

Every ultrasonic gas flowmeter of the FLOWSIC600-XT product family is designed for custody transfer gas flow measurement and satisfy the requirements of all current national and international standards. Four device variants are available, whereby every gas flowmeter satisfies very special performance requirements. The selection requirements on a gas flowmeter are not always the same. This performance-oriented classification of FLOWSIC600-XT,

-XT Forte, -XT 2plex and -XT Quatro is therefore helpful as the first step in focusing and solving tasks and meeting customer requirements in a unique manner. No matter which type you chose, every FLOWSIC600-XT can be easily installed into all custody transfer applications with a nominal width between 3 and 48 inches. Connection to all conventional flow computers on the market is also easy.

FLOWSIC600-XT

FLOWSIC600-XT is the proven all-rounder for all natural gas custody transfer applications. 15 years of field experience with FLOWSIC600 flowed into this 4-path technology.

FLOWSIC600-XT Forte

A lot of meter for so little space. FLOWSIC600-XT Forte offers 8 paths on two different path levels thereby delivering the highest measurement accuracy. It is automatically the first choice for installations in plants with short inlet and outlet zones.

FLOWSIC600-XT 2plex

The very compact FLOWSIC600-XT 2plex combines a gas flowmeter for custody transfer with a control measurement device, and features extended diagnostic functionality thanks to its additional independent measurement path.

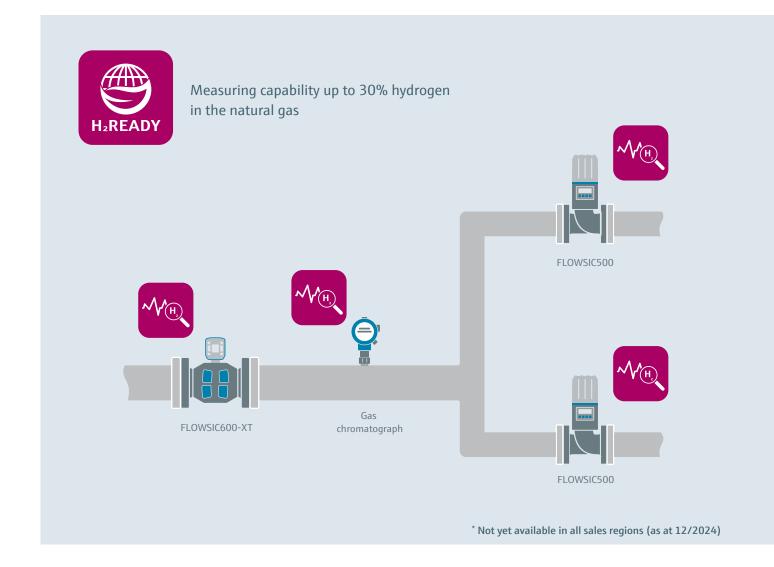

FLOWSIC600-XT Quatro

For redundant measurements in custody transfer of natural gas, FLOWSIC600-XT Quatro combines two measurement devices in one – with an installation length equivalent to that of a single device.

Gas Quality Indicator (GQI)*

Today's gas market is served by a large number of different gas suppliers. With FLOWSIC600-XT, plant and network operators are prepared for this challenge. The gas flowmeter is not only officially approved for up to 30% hydrogen content in the natural gas (according to MID), it comes with a Gas Quality Indicator that allows the hydrogen content in the natural gas to be monitored. If the configured limit value is exceeded due to fluctuations in the gas qualities, FLOWSIC600-XT reports this automatically to a control

center. This enables changes in the hydrogen content and also the heating value to be detected in real time and substantial savings in time and costs to be achieved. The Gas Quality Indicator, which is based on the i-diagnostic technology, assists in optimizing the network balance. It thereby makes a significant contribution to guaranteeing the contractually agreed gas qualities when measuring the gas quality using a gas chromatograph or measuring the hydrogen content is not possible.

FLOWgateTM – The intuitively designed operating software

FLOWgate™ intelligently links the diagnostic data and presents them in a processed form. The quick status function provides immediate information about the current status of the application, and if a warning limit is reached, the solution wizard can be used to analyze the problem at the click of a button. In order to get a quick overview or analysis, each user can put together measured values and diagnostics parameters as required in the measure value overview, and then amend or save their overview.

FLOWgate™ provides online or offline access to FLOWSIC600-XT and therefore to all the measured value and diagnostic data at any time via a PC or a tablet. The graphic preparation of trend analyses simplifies evaluation of the measurement sequence and gives information about changes to the process. The report manager can be used to create compact diagnostic, maintenance and calibration reports at any time. Different assistance functions, such as for commissioning, considerably simplify device operation.

FLOWSIC600-XT: The Perfect Match

Product Description

As the successor to the successful FLOWSIC600, the FLOWSIC600-XT ultrasonic gas flow measuring instrument is setting new standards in its market segment. FLOWSIC600-XT is available in variants with 4, 4+1, 4+4, and 8 measurement paths to meet the requirements of every application, whether it is being used as a standalone or system solution. In addition to the OIML R 137 Class 1.0 requirements, FLOWSIC600-XT meets the requirements of Class 0.5 and AGA9 in their entirety.

FLOWSIC600-XT contains with i-diagnostics™ – an intelligent application diagnostics function – and PowerIn Technology™, which enables continuous measurement operation for up to three weeks in the event of a mains voltage failure. These functions help ensure usability and unparalleled operational safety – and what's more, the equipment offers the very best possible measurement accuracy and long-term stability.

At a glance

- User-friendly product family
- Automatic correction of pressure and temperature influences
- Available for all operating conditions
- PowerIn Technology[™] for reliable backup operation
- Intelligent application diagnostics with i-diagnostics[™]
- computers using connect-and-go technology
 Measuring capability up to 30% H₂

Can be extended to include flow

- Measuring capability up to 30% H₂ in the natural gas
- Gas Quality Indicator for quantifying the H₂ content

Your benefits

- Low measurement uncertainty in every application
- High measurement data reliability and availability
- The right ultrasonic gas flowmeter for every application – without compromise

- Simple device integration even in compact systems
- Quick and easy commissioning and checking
- Cost-effective quantification of the H₂ content in natural gas

Fields of application

- Custody transfer measurement of natural gas with up to 30% H₂
- Transport and storage of gas
- Onshore and offshore applications
- Gas production applications with H₂S and CO₂ content

Technical data

The precise device specifications and product performance data may vary and are dependent on the respective application and customer specifications.

Measured values	Volumetric flow, a. c., volume a. c., gas velocity, speed of sound, optional volume correction via integrated \ensuremath{EVC}				
Number of measuring paths	4 4+1 (2plex) 4+4 (Quatro) 8 (Forte) 2				
Measurement principle	Ultrasonic transit time difference measurement				
Measuring medium	Natural gas (with up to 30% hydrogen), air, natural gases containing increased levels of CO_2 , N_2 , H_2S , O_2				
Measuring ranges					
Q_{min}	5 m ³ /h 1,000 m ³ /h (180 cf/h 35,300 cf/h)				
Q_{max}	1,000 m ³ /h 120,000 m ³ /h (35,000 cf/h 4,238,000 cf/h)				
	Measuring ranges depend on nominal pipe size				
Repeatability	$\leq 0.05\%$ of the measured value (typical) ≤ 0.1 % of the measured value for 2-path type				
Accuracy	Typical error limits $Q_t \dots Q_{max} \mid (Q_{min} \dots Q_t)$				
4-path and 8-path type	≤ ± 0.5% (±1.0%) Dry calibrated				
4-path and 8-path type	\leq ± 0.2% (± 0.5%) After flow calibration and adjustment with constant factor. Without uncertainty of the calibration test facility.				
4-path and 8-path type	\leq \pm 0.1% (±0.2%) After flow calibration and adjustment using polynomial or piecewise correction Without uncertainty of the calibration test facility.				
2-path type	\leq ±1.5% (± 3.0%) Dry calibrated				
2-path type	\leq ±0.5% (± 1%) After flow calibration and adjustment. Without uncertainty of the calibration test facility.				
Min. pipe requirements					
4-path type	According to OIML Class 1.0: with straight inlet zone of \geq 10D or \geq 5D with flow conditioner According to OIML Class 0.5: with straight inlet zone of \geq 10D and flow conditioner				
8-path type	According to OIML Class 1.0: with straight inlet zone of \geq 2D According to OIML Class 0.5: with straight inlet zone of \geq 5D				
2-path type	According to OIML Class 1.5: with straight inlet zone of \geq 50D or \geq 20D with flow conditioner				
	For details, see the operating instructions				
Diagnostic functions					
i-diagnostics [™]	Integrated device diagnostics, and advanced intelligent device and application diagnostics via FLOWgate™ operating software

4	"Meter- ing package performance" according to § 6.3	10 DN	4	"Metering package performance" according to § 6.3	10 DN	5 DN	5 DN	3 DN	2 5 DN
8	"Meter- ing package performance" according to § 6.3	5 DN	8	"Metering package performance" according to § 6.3	5 DN	2 DN	3 DN	3 DN	2 5 DN

¹ Minimum requirements with our flow conditioner (PTB type); Installation recommendations for other flow conditioners on request

² Minimum requirements with CPA50E, CPA55E or our flow conditioner (PTB type); installation recommendations for other flow conditioners on request

Installation in the pipeline for bidirectional use (minimum requirements)

- 1 FLOWSIC600-XT
- 2 Alternative temperature measuring points
- 3 Flow conditioner

 $^{^3}$ If C \geq 5 DN, the temperature measuring point must be located in the pipe section C at a distance of 3 ... 5 DN

⁴ Measuring distances must be calibrated for the temperature measuring point with a thermowell installed
